

Full-Stack Developer

Are you a bit of a tech rebel? Do you like to experiment and do you often get it right?

You'll be interested in this job because you've probably already been working on full-stack systems for a while and have solid understanding of how those fit together but you need a new challenge.

Is Pycom where you go next?

Our DNA: a fast paced, growing IoT tech company with a great team, exciting portfolio and a fast-growing community of developers and enterprises craving our solutions.

Our Customers: a growing number of developers, enterprises and education establishments in over 56 countries.

Our platform: conventional Internet of Things platforms has nothing to do with what we deliver. The Pycom Exchange is a brand new way to deliver IoT Services, connecting smart devices and their data to the places and people that matter.

What you'll do

We have a unique Internet of Things portfolio of IoT Modules with a need for a beast of a management platform which we've started building and which you will help put together. This position includes (but is not limited to):

- Designing and building the layers of the portal stretching from back to front-end
- Influencing our direction and using your skills to overcome challenges fast
- Collaborating with the other Pycom teams to give feedback adjacent activities and systems and taking the lead on defining visionary new features

What we need from you

Your social skills:

- You are comfortable working autonomously and up for new challenges
- Startup culture (no 9:00 - 17:00 mentality)
- Good level of English and most of all passion and enthusiasm!

Your technical skills:

- Good back-end JavaScript skills: mongoDB, Node.js, Express
- Experience in creating REST APIs
- Good front-end JavaScript/HTML/CSS skills: Pug, jQuery, Bootstrap

- Familiar with Git
- Knowledge of prototyping and OOP concepts
- Knowledge of unit testing and mocking, preferably in JavaScript
- Comfortable with macOS and its terminal (Bash, grep, etc.)
- Security-awareness

The following technical skills are a plus:

- Experience with Redis or similar
- Experience in D3.js
- Knowledge of Python 3
- Experience in cloud API integration (AWS, Azure, etc.)
- Familiarity with IoT protocols (MQTT, CoAP, LoRA, SigFox, etc.)

Working at Pycom

If you join us you can expect the following:

- Attractive salary package including company shares
- Latest MacBook Pro (13 inch retina screen, 16 GiB RAM, 250 GiB SSD)
- 25 vacation days
- Our brand new cool offices located in Eindhoven (Strip-S)
- A team of smart, passionate, and international people
